

AquaKleen Cleaning Systems

Vertical Agitators

AquaKleen vertical agitating washers provide an economical solution to cellular cleaning. Modularized with electric heating coils the system may be located in any location that has an air and electric supply. Systems are available with Ultrasonic agitation if desired. Stainless steel construction is standard.

The 18" X 36" platform holds three standard baskets keeping production lots separated for traceability.

Adjustable up and down vertical motion provides vigorous agitation to remove chips, oils, buffing compounds, and greases

Rotating Baskets

Our multi-stage cellular rotating basket cleaning systems utilize safe, aqueous cleaners to effectively clean, rinse, and dry a wide variety of ferrous and non-ferrous parts.

Systems are available to handle up to ten (10) baskets per cycle, and offer multi-action cleaning with high volume immersion, high impact spray impingement, and/or ultrasonics.

Programmable Hoists

Our fully automatic programmable hoist systems can process baskets, racks, or barrels with loads up to 2000 pounds through multiple cycles. Optional stainless steel and plexiglass enclosure allows equipment placement in sensitive manufacturing areas. The systems are ideal for cleaning, pickling, bright-dipping, phosphating, electropolishing, chromating, or passivating. Systems may be designed with DC rectification and ultrasonics.

Carousel Systems

The carousel can process large volumes of product through a repeated cycle utilizing a minimum amount of floor space. Cleaning, pickling, passivating, bright dipping, and chromating are typical cycles for this system.

Conveyor Washers

Conveyor washers are ideally suited for processing parts with smooth surfaces that are easily drained, or oriented in baskets or racks. These systems are available in a variety of sizes and process steps for stand alone operation, or integration into automated production lines.

Rotating Drum Washers

Rotating drum washers are designed for processing volumes of parts in large batch sizes. Wash, rinse, and dry cycles may be designed into these systems.

Rotating Table

Rotating Table cleaning machines can process large components that are difficult to clean with conventional machines. Wash, rinse, and dry may be designed into a single chamber. Machine designs available as front load, hinged door, and pass through.
